DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 to 5, 8, 10, 13, and 15 to 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al (2002/0179000).

The Lee et al reference teaches a method of creating a single crystal ferroelectric material, note entire reference. A powder is first created consisting of PMN-PT where the composition can be varied, note page 2. The composition is a ceramic compound. The material is made by adding powders of the composition with an additive. The resultant material is heated treated at 1,200c, note example 1. More than one additive can be used note example 3. The material is crystallized by heating in a crucible with

diameters above 5cm, and the resulting crystal has similar sizes, note page 4. The crystallization condition can be high temperature and high pressures, note example 13. The sole difference between the instant claims and the prior art is the exact composition. However, in the absence of unexpected results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentation the optimum, operable composition in the Lee et al reference in order to create the desired properties as the composition will change the properties of the final product.

Claims 6, 7, 9, 11, 12 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al (2002/0179000).

The Lee et al reference is relied on for the same reasons as stated, supra, and differs from the instant claims in the additive and conditions. However, in the absence of unexpected results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentation the optimum, operable conditions and additives in the Lee et al reference in order to increase the uniformity of the final product.
